

ABSTRACT OF THE DISCLOSURE

The present invention discloses a multimedia modular card, a device for operating the same, and an integrated multimedia system. The multimedia modular card includes a bus interface removably formed in the device for
5 operating the modular card, for transmitting/receiving data to/from the device, a local controller for controlling the operation of the multimedia modular card, according to an input signal from the bus interface, and a local processor programmed to perform functions corresponding to previously-set multimedia support types, and operated by the local controller. Accordingly, the user can
10 embody a desired multimedia system by selectively mounting the multimedia modular card having a specific function on the system.
